

Dr Webster is a Research Fellow in the Cardiovascular Division at The George Institute for Global Health with a keen interest in the development of novel strategies to bridge the evidence-practice gap in Cardiovascular Disease prevention. She is currently the Co-ordinator of the SPACE Collaboration, a global academic consortium of clinical trials including over 3000 patients assessing a cardiovascular polypill in improving adherence to essential medications in those at highest risk of Cardiovascular Disease. She is also the Project Director of a GACD/NHMRC co-funded grant investigating the impact of a half-strength Triple blood pressure lowering pill on the proportion of patients reaching target and the time taken to reach target.
