

THE GEORGE INSTITUTE  
for Global Health

# Pill Pilot study and SPACE Collaboration

Dr Ruth Webster

The logo for PILL Pilot features a red ribbon graphic on the left that forms a heart shape and loops around the first 'P'. The text 'PILL Pilot' is in a bold, black, sans-serif font. Below it, the tagline 'Programme to Improve Life and Longevity' is written in a smaller, black, sans-serif font.

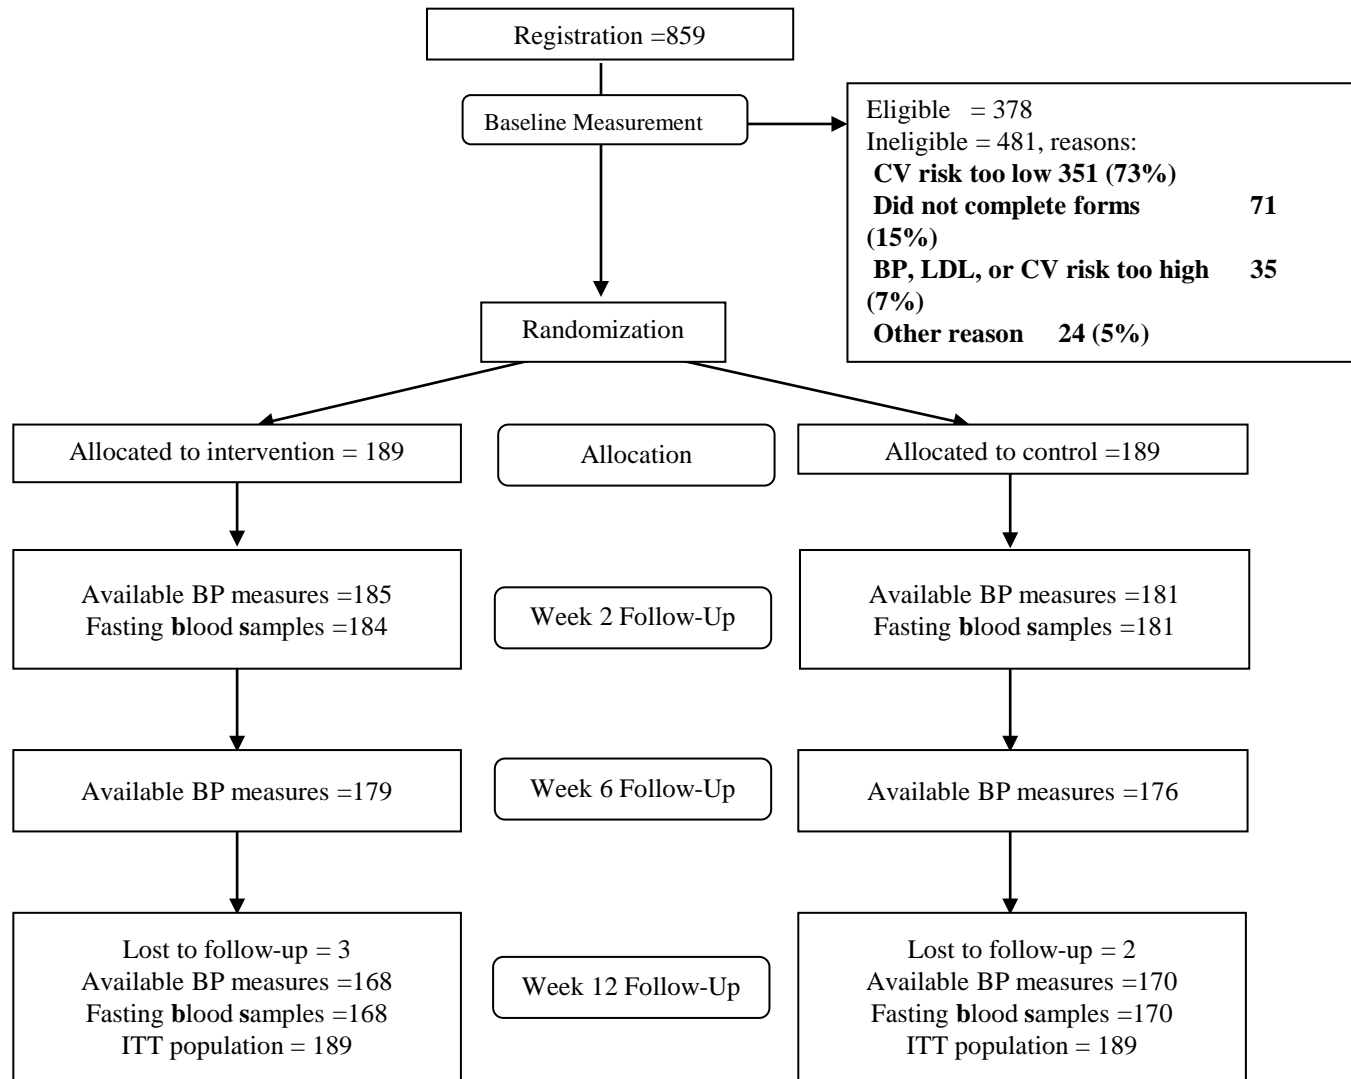

**PILL Pilot**  
Programme to Improve Life and Longevity

# Trial Design

- Randomised, controlled, double-blind trial, Red Heart Pill V2b - aspirin 75mg, simvastatin 20mg, lisinopril 10mg, hydrochlorothiazide 12.5mg
- (Polypill) vs. placebo
- N = 400
- Eligible if  $\geq 7.5\%$  CV risk and no indication or contraindication for treatment with RHP components
- 12 weeks follow-up plus 4 week post trial phone assessment

# Regional Co-ordinating Centres

| <b>Country</b>  | <b>PI</b>                 | <b>Project Manager</b>       | <b>Other key staff</b>  |

| Abdominal pain                     | 4              | 2%  | 1       | 1%  | 0.2     |
| Constipation                       | 10             | 5%  | 4       | 2%  | 0.08    |
| Flatulence                         | 6              | 3%  | 5       | 3%  | 0.7     |
| Other side effect                  | 39             | 21% | 28      | 15% | 0.07    |
| Total**                            | 81             | 43% | 59      | 31% | 0.003   |

# Summary

- Excellent risk factor reductions achieved 10/5 mmHg and 0.8 mmol/L LDL
  - sustained
  - consistent across major subgroups
- Appreciable side effect rate, absolute excess of 16% reporting side effects and 6% stopping treatment:
  - mostly due to cough and GI symptoms
  - mostly apparent in first few weeks
- Predicted more than halving in CV risk

# **SPACE Collaboration**

**(Single Pill to Avert Cardiovascular Events)**

# What is it?

***An international academic collaboration for the clinical evaluation of combination pills containing statin, aspirin and blood pressure lowering medications in patients with established indications for treatment***

# Low Hanging fruit

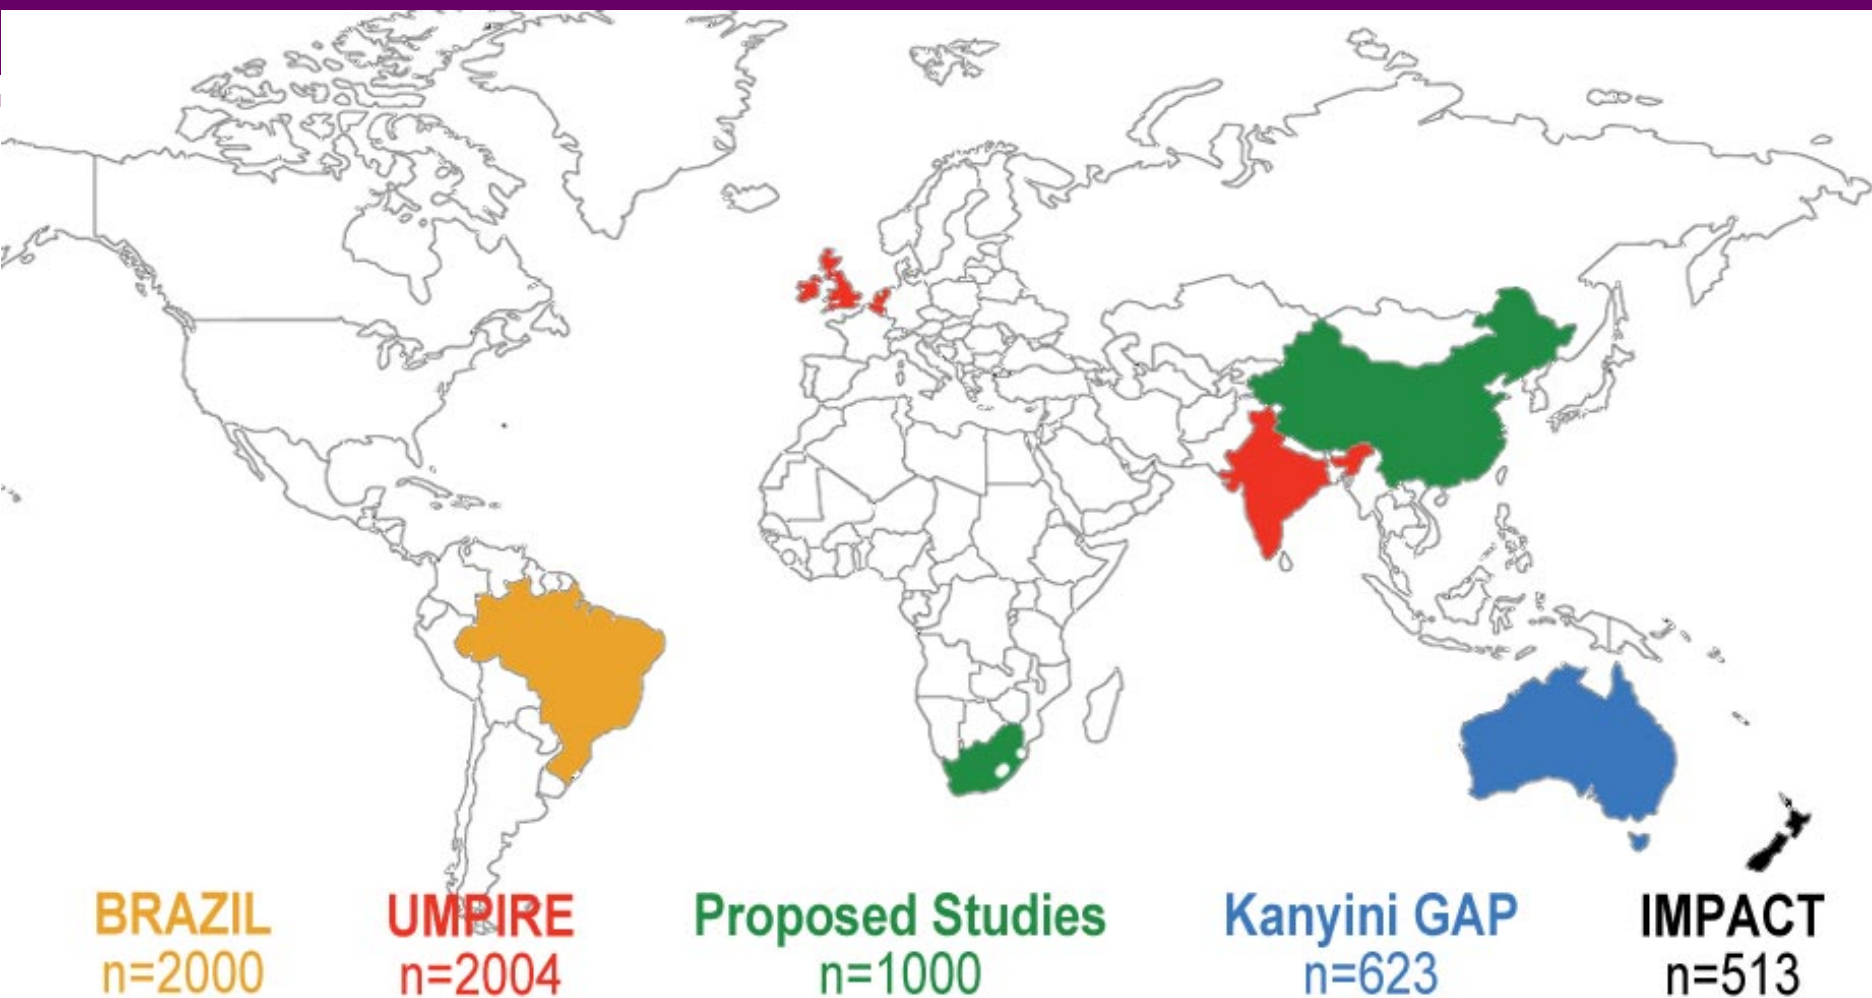

- **Secondary prevention/high risk primary prevention is the optimal first target group**
  - Highest risk
  - Maximum impact
  - All medications recommended
- Opportunity to collaborate, share information and combine results for eventual meta-analysis

**SPACE Collaboration**

# Collaboration trials

Global Trials Collaboration

# Progress

- **UMPIRE (Europe and India – 2000 patients) has data-locked, results presented at AHA meeting in December**
- **Kanyini-GAP (Australia – 623 patients) final patient visits to be completed by September 30<sup>th</sup>, results available early 2013**
- **IMPACT (New Zealand – 513 patients) finishing mid 2013**
- **Meta-analysis mid- late 2013**

# Meta-analysis

- **Primary endpoints:**
  - Self-reported current use of antiplatelet, statin and combination blood pressure lowering therapy at 12 months
  - Change in systolic blood pressure from baseline to 12 months (surrogate endpoint for adherence)
  - Change in Total Cholesterol from baseline to 12 months (surrogate endpoint for adherence)
  - Non-inferiority margins: 3mmHg SBP, 0.3 mmol/L Total cholesterol
- **Secondary endpoints:**
  - Change in LDL and other lipid fractions at 12 months
  - Change in Diastolic BP at 12 months
  - Self-reported current use of antiplatelet, statin and at least 1 BP lowering therapy at 12 months

- QOL (EQ5D)
- Mortality – CV, non-CV and all cause
- New onset DM
- CV events (composite endpoint)
- Each component of composite endpoint
- Calculation of RRR for CV events

Unlikely to have power to determine this via meta-analysis of events

Will be done by multiplying the RR for SBP and LDL proportional to the size of the reduction and the RRR for aspirin adjusted for adherence.

# SPACE Collaboration Members

- **Co-ordinator:** Dr Ruth Webster  
The George Institute for Global Health, Sydney
- **Chair:** Professor Anthony Rodgers  
The George Institute for Global Health, Sydney
- **Deputy Chair:** Associate Professor Anushka Patel  
The George Institute for Global Health,  
Sydney/Hyderabad (UMPIRE, Kanyini-GAP)
- Prof Alan Cass, Ms Carol Burch  
The George Institute for Global Health,  
Sydney (Kanyini-GAP)
- Prof Chris Bullen, Ms Angela Wadham, Dr  
Vanessa Selak
